***Cost Effective Renewable Energy is Something Everyone Can Agree On***

On November 6, Democratic candidate Tony Evers was elected to be the next Governor of Wisconsin. The voters also decided that the State Assembly and State Senate will remain strongly in Republican control. With a politically split government, we will need to find issues that everyone can agree on to keep Wisconsin moving forward.

Clean, renewable energy is one of the areas where Republicans and Democrats can work together to make Wisconsin better.

How? Renewable energy brings a lot of benefits to Wisconsin that everyone agrees on:

**Renewable Energy is Homegrown:** We can make our own power and reduce the \$15 billion we send out of the state annually for fuel and energy. We can use those savings to **create homegrown jobs** for workers who build renewable energy projects and keep the revenue that these projects generate here at home and invested in our local communities.

**Renewable Energy is Healthy:** Renewables like solar and wind generate power without any air emissions or wastewater. They will help keep our communities and families healthy.

**Renewable Energy is Smart:** Renewable energy costs have come down over 70% in the past decade, and are now competitive with traditional forms of electric generation. Because of these low prices, utilities and consumers across Wisconsin are pursuing more and more cost-effective renewable power.

Working together, we can advance renewable energy for the benefit of everyone in Wisconsin.
